

# Heavy-duty Terminal Adapters

## Device Connection Technology (Industrial Connectors – Pluscon Heavy)

Product Newsletter

Week 49

The terminal adapters were developed specially for type B (500 V) and type D (250 V) heavy duty industrial connectors. They combine plug connector contact inserts with modular terminal blocks to form a space saving connection element.

Together with the corresponding Heavycon panel mounting base, this ensures that the cable entry through the control cabinet walls meets industrial requirements. The terminal adapter provides the IP20 protection inside the cabinet and IP67 at outside the wall with plugability.

The range includes terminal adapters with screw, Push-in and QUICKON connections

### Application
