

Plastic Signs for Labeling Devices

Industrial Connection Technology

(Clipline – Marking System – Marking Material – Equipment Marking – UC-EM Device Marker)

Product Newsletter

Week 46

With the new UC-EM... UniCard device markers from Phoenix Contact, it is easy to label housings and control units from Phoenix Contact and other manufacturers.

Two types of labeling systems are available: One system prints onto single self-adhesive tags that can be affixed to devices and control cabinets to mark them clearly. The second type of label can be simply clicked into the provided frame on control units. Phoenix Contact also offers matching label frames and tag holders.

The broad temperature range of -40°C to +120°C and the good wipe resistance make them suitable for use in control cabinets and other applications in the field. The device labels are created in the UniCard format and can be printed using the Bluemark printer from Phoenix Contact. They are available in many different colors and sizes up to 60 x 30 mm. On request, it is also possible to have the device labels printed according to customer requirements.
